

Take Advantage and Reduce Wastewater Treatment Cost

EC-1

- Reduce DAF Chemicals
- Reduce Sludge Volume
- Improve Effluent Quality
- Improve DAF Stability
- Improve Free-Float Recovery

The CCI Advantage applies complex modulating energy bursts to the waste-water as it flows through the area where the induction plates are fitted to the outside of the flow-line. The required energy level is applied to the water to alter the net charge of suspended solids which begins the coagulation process and reduces the demand for chemical coagulant and or flocculant. Surface tension of the water is also reduced allowing the DAF scrapings to decant more completely which in turn limits the solids volume.

Easy Installation
Fully Adjustable
Pipe Sizes 3" - 12"
Savings Guaranteed

Low Energy Consumption
Submersible Systems
No Maintenance
Made in USA

Accelerate your company's potential with CCI Chemical products
