

C.C.I. Advantage

C.C.I. Would like to invite you to experience "The Future of Wastewater Treatment" on your wastewater at your plant before making any financial commitment.

The C.C.I. Advantage Demo System allows you to experience the benefit our technology will provide to your wastewater treatment program prior to making a decision to install a full scale system on your plant. One of our technicians will run jar tests on your wastewater comparing the chemical demand of Advantage treated and control samples. The photos below compare two jars with the same chemical dose. Jar test samples can be filtered and analyzed to compare removal efficiency of critical parameters.
